Step 1: Use the Windows desktop app (DAS Trad

Replay lives only in DAS Trader Pro on a PC. DAS's mobile apps (iDASTrader / DASTrader) and DAS Web pages do not list a replay feature. You can log into a sim account on the phone app for live sim trading, but not replay. Note: DAS allows one login at a time, so log out of the phone app before using the PC.

Step 2: Log in

Open DAS Trader Pro. If the logon screen doesn't appear, go to File > Logon. Enter the User ID and password your broker (or your DAS sim subscription) gave you, then click OK.

Step 3: Open Data Stream Mode

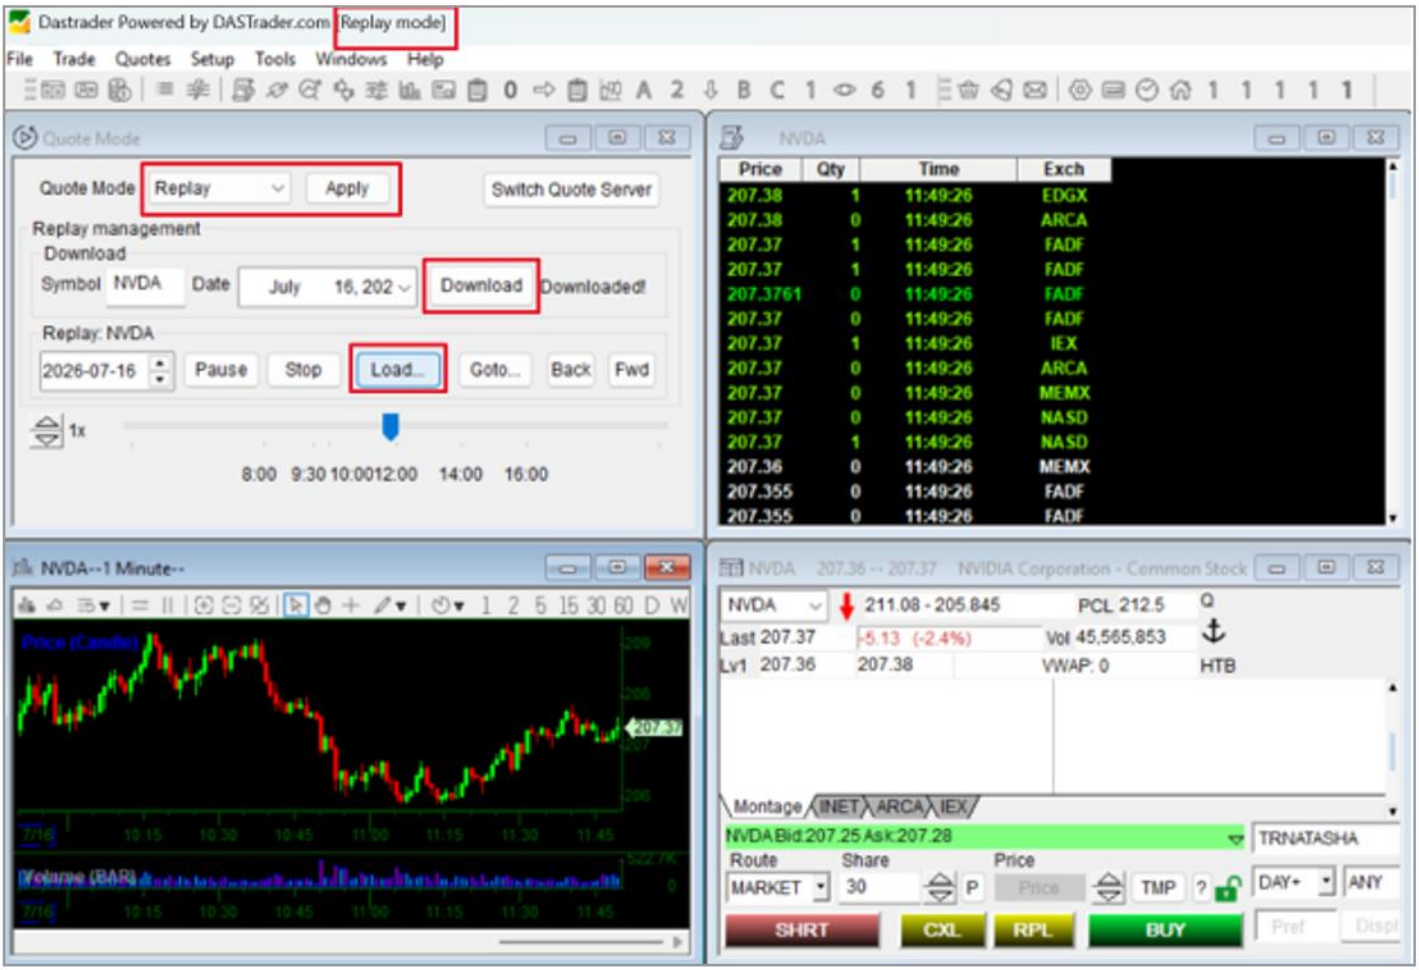

From the top menu go to File > Data Stream Mode. The Quote Mode window opens.

Step 4: Switch to Replay Mode

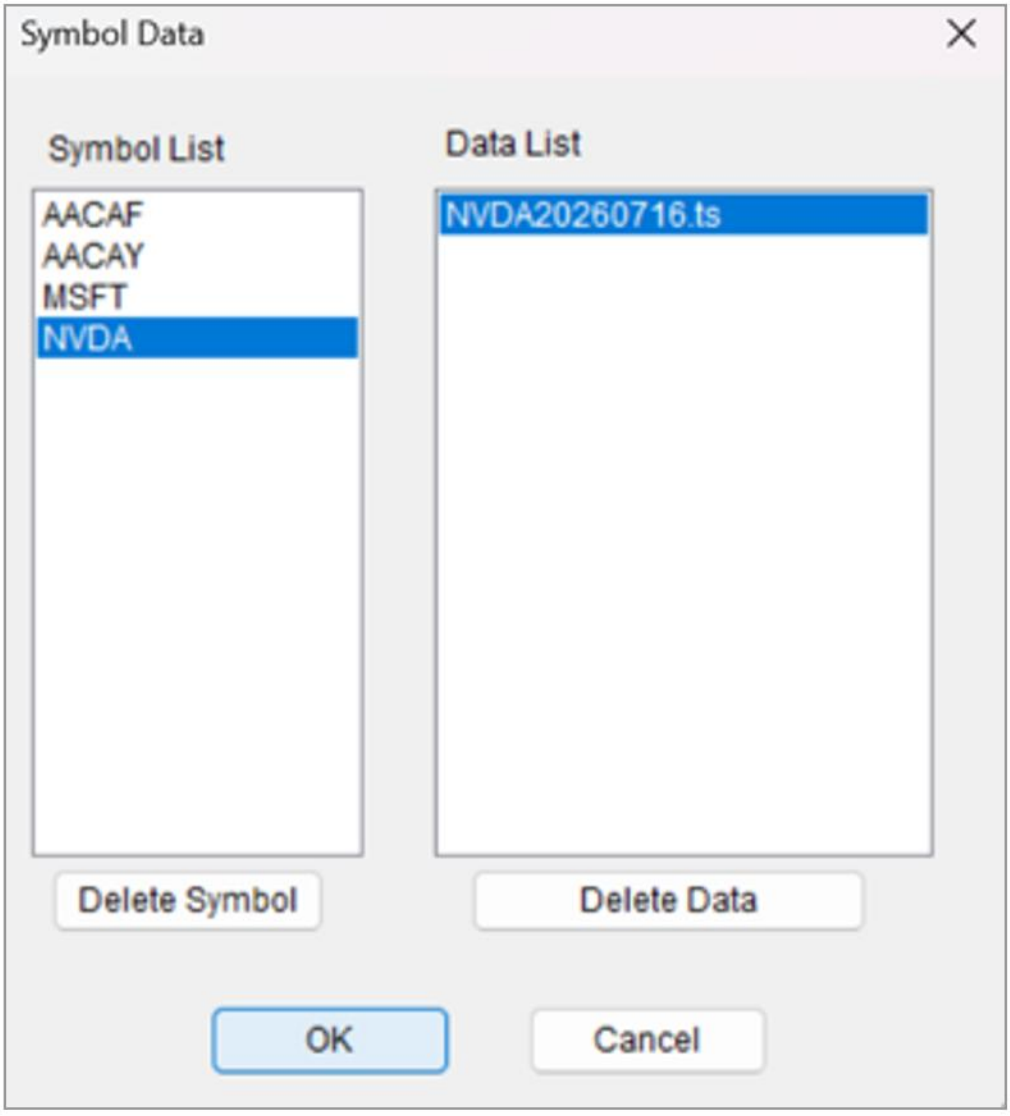

In the Quote Mode drop-down, change Normal to Replay Mode and click Apply.

Step 5: Download the day's data

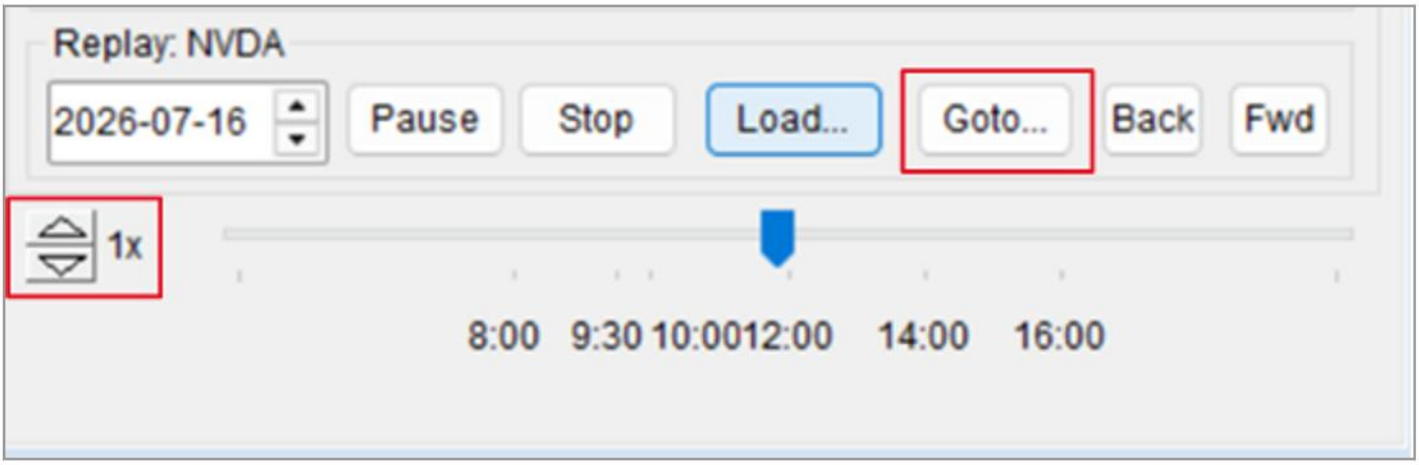

In Replay Management, type the Symbol (for example a small-cap gapper), pick the Date, and click Download. Any symbol except options can be replayed.

Step 6: Load, set speed, and go to a time

In the Replay section, click Load..., pick the symbol and date you downloaded, and click OK. Use the up/down arrow to change the speed. Use Goto... to jump to an exact time, for example 6:30 AM PT / 9:30 ET for the open.

Step 7: Open your trading windows

Open Montage (quotes and test orders), Chart, Time & Sales, and the Account, Position, and Order windows to track buying power, equity, and P&L. Your saved layout and hotkeys work like they do live.

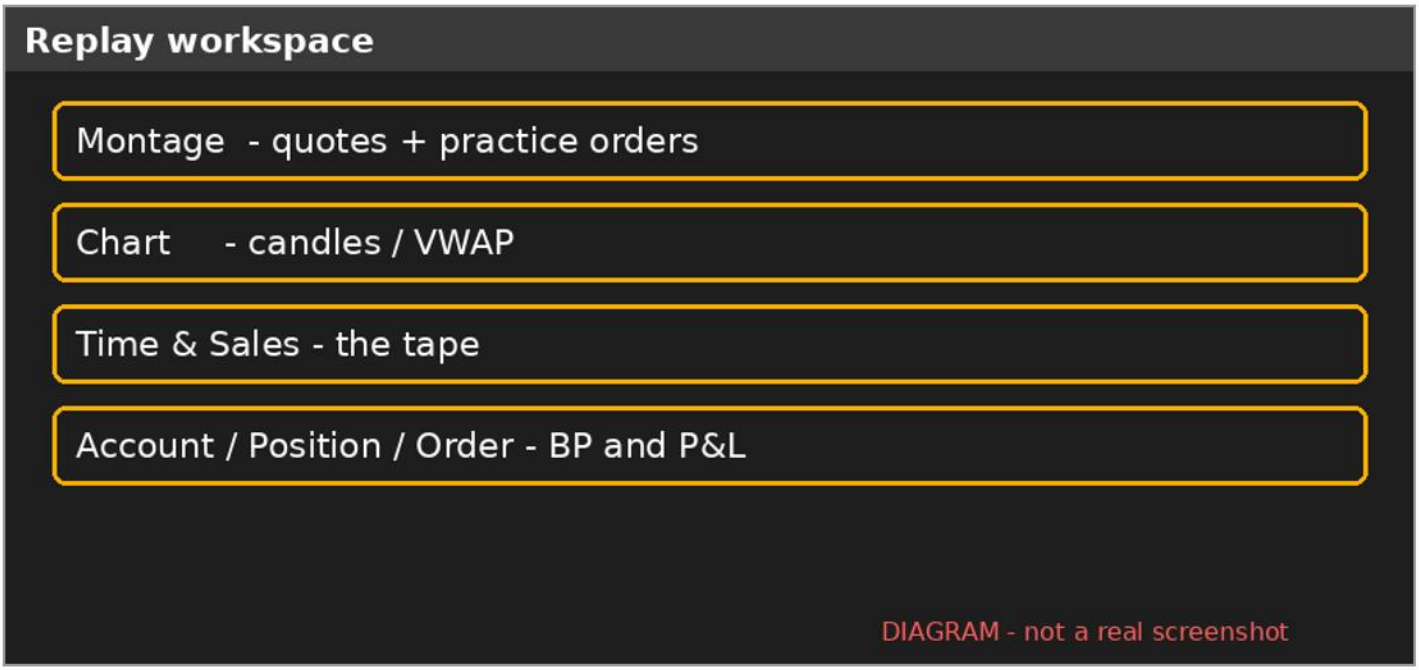

Diagram. Source: dastrader.com/docs/market-data-replay/

Step 8: Practice short trades

Use your normal short hotkeys or montage Sell/Short in the Montage. Test stop orders trigger on bid/ask, not last sale. Older forum posts said Level 2 replay and stops weren't supported. DAS docs don't confirm whether replay is Level 1 only (the add-on is called 'Replay Level 1') or whether locates are simulated, so check in your platform.

Step 9: Good to know

On a live account, replay works only outside market hours. Replay during market hours needs a DAS Simulator subscription. When you're done, go back to File > Data Stream Mode, set Normal, and click Apply.
